

ABSTRACT

It is provided a guidance display device which displays appropriate guidance for an entire screen, on the screen including plural display regions.

5 A guidance display region (21) for guiding a user's operation, including: guidance content holding units (105) and (106) which previously hold guidance display contents respectively corresponding to display regions (101) and (102) to be operated by the user and included in one screen; a guidance synthesis unit (109)
10 which obtains the guidance display contents respectively corresponding to the display regions (101) and (102) from the guidance content holding units (105) and (106), and synthesizes the obtained guidance display contents into one; and a guidance display unit (110) which displays the guidance display contents synthesized
15 by the guidance synthesis unit (109) on the screen.
